

Dear Customers;

North Branch Water and Light's continued efforts to provide reliable electric service requires us to perform a test of our major electrical equipment at the power plant.

Starting Tuesday, April 6th, we will be running our local generation to support our local load as we test our connections to the transmission system. We have preplanned with the transmission supplier and wholesale power provider. These plans do not include any electrical service interruption. However, if there is an unplanned service interruption, our line crew will be standing by to restore any affected customers as soon as possible. While testing will continue through the week, the transmission separation is only planned for Tuesday.

We will be updating our information while we test and inspect these critical electrical assets.
