## Water Service Material Inspection

ALBION, MI – To eliminate lead water services, the Michigan Department of Environment, Great Lakes, and Energy (EGLE) require public water suppliers to inventory the existing water service line materials within their system. To do this, a sample of customer service lines has been selected for inspection. The City of Albion was awarded a grant from EGLE to inspect 355 of the 2,811 services within the system. Inspections include uncovering the water service to visually inspect, photograph, and document the service line material. Inspections include visually identifying the water service within 18 inches of the building. See the diagram below, provided by EGLE, for the locations required for inspection. Letters will be sent to residents and businesses whose water service has been randomly selected for inspection.
