

Electrical Safety Document

Electrical Safety Permits ESE

Any individual may apply for an Electrical Safety inspection permit. This permit is the first step in restoring electrical service to a disconnected structure. Upon a successful inspection, a release of power will be forwarded to the appropriate power supplier, if there are no safety issues or hazardous conditions present. Power will not be released and this permit does not establish any form of Vested Rights in regard to existing violations, fees, errors or omissions, regardless of their source.

If any issues are found that require electrical work to be done, an additional permit will be required to be obtained by a licensed Electrical contractor or a qualified owner/builder who meets the requirements of the owner/builder exemption to Florida Statutes requiring licensure as found in F.S. 489.103(7) and/or F.S. 489.503(6).

I acknowledge I have read the above statement,
